

## Identify all CSAM generations to gain actionable evidence using AI Quickly, Accurately, and Safely

CaseScan enables law enforcers to sweep through TB of data from suspect devices and get initial results within minutes, with unprecedented accuracy – while reducing investigators' heavy psychological toll.

### Finding a needle in a haystack

CaseScan's AI pinpoints CSAM with superior accuracy.

The results can then be filtered by location, origin (web or 1st gen), device model, label, or filetype (videos or images).

No need to watch videos in order to identify their content - CaseScan will summarize the video and present relevant frames instead!

## INITIAL RESULTS WITHIN MINUTES

#### Fast

CaseScan analyzes terabytes of data very quickly and displays initial results within a few minutes.

#### Accurate

Superior accuracy thanks to AI capabilities developed by Netspark over the past 13 years.

### Keeping the investigators safe

Viewing CSAM materials takes a heavy psychological toll on the investigators, who are continuously exposed to emotionally damaging content. Netspark's AI solution helps protect them from unnecessary exposure.

## Unparalleled filtering capabilities

Today, investigators are forced to rely on hash identification and sort through all seized media manually, which can take weeks. This potentially jeopardizes the arrest, even in cases where the suspect is known to engage in pedophilia or to possess CSAM.

With CaseScan, you can:

- See only what matters to the investigation
- Start viewing initial results while scanning continues in the background, saving valuable time
- Add and edit tags to easily sort and filter through the media
- Easily create and export a report for the court, defense, or prosecution with all of the relevant information from the investigation

The screenshot displays the CaseScan interface for filtering AI-identified CSAM. It features a section titled 'AI identified CSAM' with buttons for 'High', 'Medium', 'Low', 'Nude', and 'Underwear'. Below this is a 'Mark as unviewed' section with a 'Show all' button. The bottom section, 'Tags to Include \ Exclude', includes a 'Show all' button and buttons for 'Hash', 'Star', 'Home', and 'Family'.

### Testimonial- Jim Cole, Retired SSA, Homeland Security Investigations

"One of the areas I most enjoyed while standing up and running Homeland Security Investigations Victim Identification Program was being involved in research and development of new and innovative technologies. One of my forensic examiners put CaseScan through it's paces with real world cases we were working. He was deeply impressed with the accuracy and speed at which CaseScan triaged digital data."

## Our Advisors

Netspark's advisory board is comprised of psychologists, investigators, and other professionals in Cyber Crime. Among them is former New Jersey ICAC Commander, Lt. John Pizzuro, who spent 22 of his 25 years conducting, managing, and leading complex criminal investigations, and Commander (ret.) Meir Hayun, former head of the child online protection bureau in the Israeli Police which tracks and captures pedophiles.
