

THE *NEW* FTK® FORENSIC TOOLKIT: REINVENTING FORENSIC ANALYSIS & REVIEW

Experience FTK through a brand new interface designed to lead investigators directly to key evidence.

Brand New User Interface

FTK's intuitive new interface design makes it easier for both experienced investigators and non-technical users to navigate within the software, dramatically reducing the learning curve. Eliminate the hours spent manually digging for the data types you're interested in, and **pinpoint key evidence FASTER.**

Choose between light mode and (fan favorite!) dark mode for the ultimate in UI personalization.

Reimagined Multimedia Review

Effortlessly pivot through multimedia case evidence using FTK's new image **Thumbnail View**. Thumbnails can be grouped and filtered by attributes such as file name, date, file extension type, image size, and device make and model, making it incredibly easy to isolate pictures of interest, such as those taken by a particular mobile device within a specified time frame. Simply hover over each thumbnail to enlarge the image, then click to view the image properties and metadata. FTK can even **reconstruct the activity leading up to and following the creation of the image** in a mini-timeline view.

Artifact-Based Filter Panel

FTK offers new, intuitive ways to cull massive data sets to narrow the scope of your investigation. Instead of manually creating complex data filters, the FTK Filter Panel **automatically categorizes the artifacts you typically look for first** as you begin your review.

And the new **Highlight Artifacts** feature presents the **most** important data upfront, highlighting the anomalies and most relevant case evidence, such as recently accessed files, connected USB devices, AirDrop activity, dark web and CSAM web activity, downloads, Apple and Google Map activity, saved credit cards and passwords, and more!

Super Timeline Evidence View

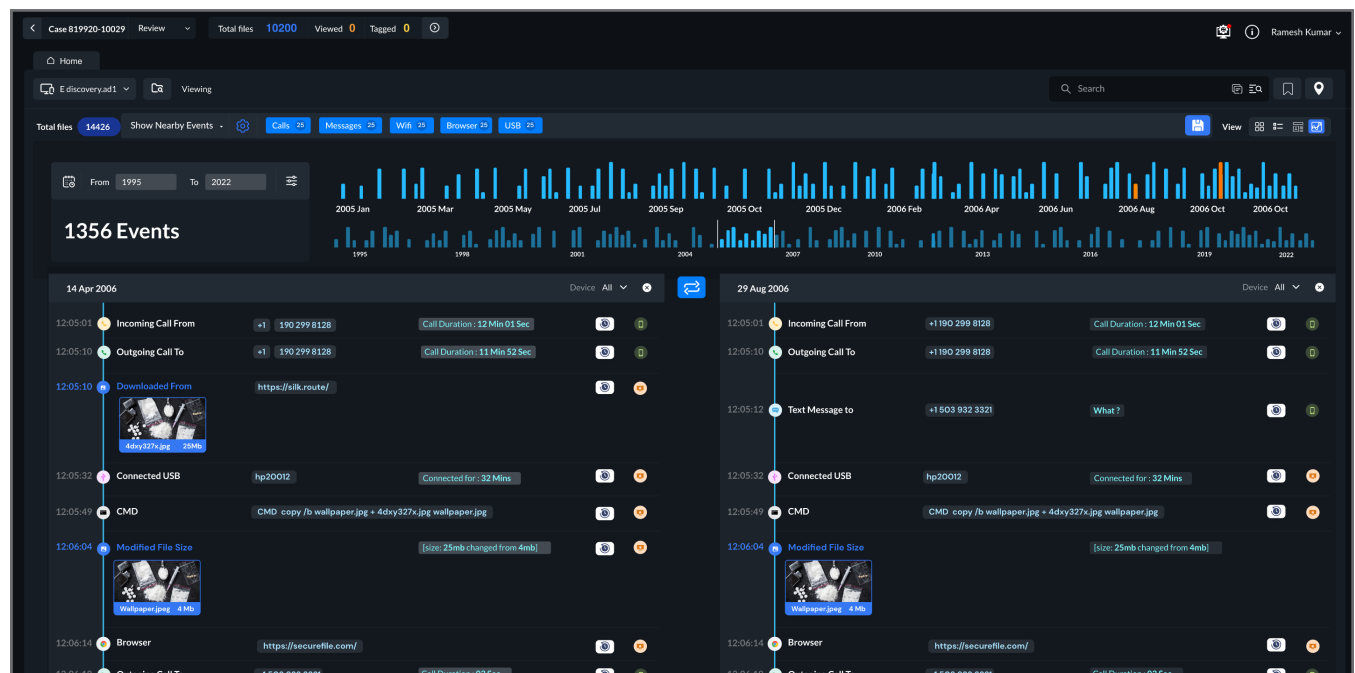

FTK's new Super Timeline View creates a **visual representation of case evidence** by piecing together timestamps, logs, actions, and other artifacts. It helps investigators understand what was happening during an incident or crime, often revealing patterns or trends within their evidence set.

Use **Super Timeline** to compare two different mobile phone devices to find overlaps in communication, movement, or shared contacts. Since Super Timeline is interactive, you can click on timeline dates and evidence items for a deeper dive into those data points, which **eliminates significant time spent trying to manually run searches and filters** to relocate the same information.

Smart Grid

Stop spending countless hours endlessly scrolling through an antiquated data grid! With FTK's new **Smart Grid**, technical and non-technical users alike can **easily build complex compound filters to locate key evidence faster**.

The Smart Grid view shows you every data point that is **POSSIBLE** to filter on. To build a Smart Grid filter, simply click on the metadata values in one or more columns that you want to filter on. For example, want to see just the larger sized pictures? Easily isolate **images only**, with the **.mpeg** file extension that are **over 10GB in size** with just three clicks.

exterro[®]
FTK[®] 8.0
will be released later this summer!
