

# Child Abuse and Neglect e-Learning modules

**80+** *AMA PRA Category 1<sup>TM</sup>*  
credits / ANCC credits

## **NCA-Approved formal didactic training**

- Case-based
- Self-paced
- Continuously updated
- Developed by expert child abuse professionals

Evidentia Learning develops internationally accredited e-learning modules related to child abuse and neglect in partnership with the most experienced and respected child abuse pediatricians and forensic nurses.

# Medical Evaluation of Child and Adolescent Sexual Abuse

Comprehensive and based on the best available evidence, this e-learning module is the new gold standard in child abuse education.

Key topics include:

- Trauma Informed Care
- Cultural Considerations in Recognizing and Responding to Child Sexual Abuse
- Clinical Presentations
- Medical History
- Physical Examination
- Forensic Evidence
- Sexually Transmitted Infections
- Interpretation of Findings

Developed in partnership with:

Nancy Kellogg, MD  
Joyce Adams, MD  
Jordan Greenbaum, MD

# Trauma Informed Care in Child Sexual Abuse

Learn how to use a trauma-informed, rights-based approach when caring for pediatric and adolescent sexual assault patients.

Developed in partnership with:

Jordan Greenbaum, MD  
Nancy Kellogg, MD  
Joyce Adams, MD

# Pediatric Sexual Assault

Pediatric Sexual Assault teaches students and healthcare professionals the language of evidence-based evaluative methods used when caring for the pediatric sexual assault patient. Sixteen interactive, pediatric peer-reviewed cases are included.

Developed in partnership with:

Diana K. Faugno, MSN  
Stacy A. Mitchell, DNP  
Rachell Ekroos, PhD  
Patricia M. Speck, DNSc

# Human Trafficking - Child Sex Trafficking

This comprehensive e-learning module teaches health professionals how to recognize and respond to children and adolescents who may be involved in sex trafficking using a trauma-informed, rights-based approach.

Developed in partnership with:

Jordan Greenbaum, MD  
Kirsten Bechtel, MD

# Pediatric Strangulation Case Review and Assessment

Developed in partnership with the International Association of Forensic Nurses (IAFN), this module contains 29 cases of living pediatric and adolescent patients assessed for strangulation and cared for in the healthcare setting.

Expand your knowledge, build your skills, and refine your technique in the evaluation and management of pediatric and adolescent strangulation.

This module provides resources, tools and guidance to ensure the clinician is prepared to provide standardized care and develop policies and procedures based on the best available evidence for patients who have experienced strangulation.

Bonus module:

- Abridged Version (1-2 hours)  2.5

Developed in partnership with:

# Child Abuse Atlas

This online educational platform contains well over 1,500 images and 700 actual cases used to illustrate 150 topics. Every topic includes cases depicting Normal Anatomy, Congenital and Developmental Variations, Trauma and Nontraumatic findings.

The Child Abuse Atlas helps build skills to medically evaluate, assess and diagnose child (sexual) abuse collection and treatment protocols.

700+ cases  
with more than 1,500 images  
covering 150 topics  
in child & adolescent sexual abuse

## Physical Abuse Series: Core Framework

Developed for all health care providers on the “front lines” who treat children for a variety of illnesses and injuries. Learn how to recognize “red flags”, respond with discerning questions that determine next steps, conduct an age- and injury-specific evaluation, document findings, and determine the likelihood of abuse. The Core Framework module is supplemented by a set of “plug-in” modules that provide in-depth information based on the injury type.

Developed in partnership with:

Nancy Kellogg, MD  
Natalie Kissoon, MD

## Physical Abuse Series: Mimics

This case-based e-learning module provides an overview of cutaneous, bone, and intracranial findings that either look like trauma but are not, or are caused by trauma that is not abusive. This module encourages the learner to “think common, remember rare” in carefully considering the differential diagnosis. The module combines narrative descriptions and case studies to promote critical thinking in clinical practice. After working through the module, the case-based approach to learning facilitates the transition of knowledge to clinical practice and serves as an accessible reference tool in clinical settings.

Developed in partnership with:

Lauren Burge, MD  
Nancy Kellogg, MD

## Physical Abuse Series: Abusive Head Trauma

Infants and children who are eventually diagnosed with abusive head trauma may present clinically in a variety of ways, ranging from no symptoms to fatality or near-fatality. In this module you will learn about the most common findings in Abusive Head Trauma, how to recognize it from historical and physical findings, the mechanisms and timing of injuries, and how to distinguish it from other forms of head injury. Clinical Prediction Rules, as well as guidance for screening, history, and examination, including imaging studies and laboratory evaluation help you apply this knowledge to your clinical practice.

Developed in partnership with:

Kirsten Bechtel, MD  
Gunjan Tiyyagura, MD  
Ammarah Iqbal, MD  
Lora Spiller, MD  
Nancy Kellogg, MD, Senior Medical Editor

## Physical Abuse Series: Sentinel Injuries

This case-based e-learning module asks you to recognize and respond to an unexpected, medically minor injury in a pre-cruising infant. Sentinel injuries are visible to caregivers and often considered “minor” because they typically heal quickly without medical care. However, these injuries often precede further injury or abuse so warrant urgent, careful evaluation. This module defines Sentinel Injuries while dispelling common myths and misconceptions. Guidance for screening, history, and examination, as well as advice for talking to caregivers and Child Protective Services about even the most difficult cases will help you apply this knowledge to your clinical practice. A video interview with the author will answer many of the most frequently asked questions.

Developed in partnership with:

Hillary Petska, MD

Lynn Sheets, MD

Nancy Kellogg, MD, Senior Medical Editor

# Physical Abuse Series: Torture and Starvation

This case-driven e-learning module explores the characteristics of torture and starvation, how to work with investigators, and how to evaluate and treat potential victims.

This module is developed to train front-line providers to recognize severe and repeated child abuse and neglect.

- Understand the historical context of the definition of torture
- Define torture as a medical diagnosis
- Recognize the elements of torture that warrant the need for it to be a distinct category of abuse
- Identify issues related to physical and emotional recovery
- Define starvation as a form of abuse
- Recognize the overlap of torture and starvation as medical diagnoses
- Understand the specific medical concerns related to the rehabilitation of starvation

# Physical Abuse Series: Medical Neglect

Medical Neglect is characterized by the failure of a caregiver to obtain or provide appropriate medical care for a child.

On completion of this e-learning module, you will be able to

- Define the two forms of medical neglect and the diagnostic criteria one must consider when making the diagnosis.
- Understand the multiple reasons children may not receive appropriate medical care.
- Discuss various ways medical neglect can present.
- Guide medical providers in taking a holistic approach when responding to medical neglect.

Developed in partnership with:

Amy Gavril, MD, MSCI  
Nancy Kellogg, MD

coming soon

# Physical Abuse Series: Supervisory Neglect

Supervisory Neglect occurs whenever a caregiver's supervisory decisions or behaviors place a child in his or her care at significant ongoing risk for physical, emotional or psychological harm. Supervisory neglect, similar to general neglect, is difficult to define.

This e-learning modules will help you to:

- Understand the definitional challenges that exist for the concept of neglect in general and how this extends to supervisory neglect.
- Recognize the complex interplay of child, parental, familial, community, and societal factors which all contribute to the occurrence of neglect.
- Identify clinical presentations that are concerning for supervisory neglect.
- Recognize that the response to supervisory neglect requires a systemic, multi-level approach and understand your role in this response.

Developed in partnership with:

Sarah Vega, MD  
Shalon Nienow, MD  
Nancy Kellogg, MD

# Physical Abuse Series: Cutaneous Injuries

Bruises are among the most common visible injuries resulting from physical abuse, and often are the presenting system prompting a child abuse evaluation. This case-based e-learning module will help you to accurately diagnose most bruises on visual inspection.

Developed in partnership with:

John Melville, MD  
Nancy Kellogg, MD

coming soon

# Physical Abuse Series: Fractures

Fractures are the second most common injury in abused children (with cutaneous injuries being the most common). Fractures are also very common accidental injuries and can occur at any age. This case-based e-learning module will give you an understanding of the different fracture types and characteristics that have a higher specificity for maltreatment. You will also learn how to determine when a skeletal injury is concerning for abuse.

Developed in partnership with:

Lora Ruth Spiller, MD  
Anthony Zarka, DO  
Nancy Kellogg, MD
