Key advantages
↓

Advanced video analysis

Through advanced filtering capabilities, such as motion, facial, and object-based searches, you can rapidly and accurately review hours of video footage in a fraction of the time.

Facial Detection and Recognition

Quickly find and match all images and videos where different individuals are depicted, and search between the data to find matching faces of suspects or victims.

Artificial Intelligence (Griffeye Brain)

Automatically detect and classify various objects in large image sets, and identify and flag previously unseen images and videos that depict child sexual abuse content.

Collaborative efforts (GID)

Interconnect with other investigators—within or across your team—to effortlessly identify previously viewed media and reduce the number of case files that need to be reviewed.

Workflow checklist

An interactive checklist helps you combine all tools and capabilities in a logical workflow to ensure a thorough analysis of a case and avoid missing any clues.

Griffeye and NCMEC join forces

Griffeye are joining forces with the National Center for Missing and Exploited Children (NCMEC), the largest and most influential child protection organization in the US. The result will be a collaborative platform for NCMEC to share valuable information with U.S. child sexual abuse investigators. This will give investigators the ability to compare file data against NCMEC's systems in real time through Griffeye Analyze.
