

# Forensic Testing & Genealogy Services

## WHAT IS INVESTIGATIVE GENETIC GENEALOGY?

Investigative Genetic Genealogy is the utilization of genetic genealogy and DNA analysis in combination with traditional genealogy research to develop leads and help solve a crime.

At Gene by Gene, we use extracted DNA from your case to create a DNA “profile” that you can choose to have uploaded into our FamilyTreeDNA database.

Our Investigative Genetic Genealogy Team then utilizes the FamilyTreeDNA database to identify individuals who are genetically related to the unknown sample to determine the identity of the suspect or victim.

## OUR SERVICES

Gene by Gene and FamilyTreeDNA provide Investigative Genetic Genealogy services to law enforcement for the purposes of identifying perpetrators of violent crimes against individuals (homicide or sexual assault) and identifying the human remains of deceased individuals.

For further information about Gene by Gene's services, please visit our website.

## Why Gene by Gene?

Gene by Gene is the only company that includes all of the following:

- *In-house lab for processing extracted DNA.*
- *Direct access to the FamilyTreeDNA database. We are the only genealogy company that allows law enforcement use of database.*
- *Access to an expert group of genetic genealogists.*
- *Leaders in setting best practices for this evolving science.*

## HOW IT WORKS

Case submission starts with a review of the case and the evidence. Gene by Gene's team of experts will review your case file and provide an evaluation of the suitability of the sample prior to testing.
